Computer Systems graduate with two years of hands-on experience as a Full-Stack Developer, specialized in REST APIs and scalable systems with Java and PHP. Experienced with MySQL and PostgreSQL, CI/CD pipelines with GitHub Actions, payment integrations, and process automation. Graduated with the highest GPA of my program. Use AI coding agents (Pi, Zed Delta) in my daily workflow to accelerate development. Passionate about building efficient, secure solutions with solid engineering practices.

PROFESSIONAL EXPERIENCE

Cautiva Producciones **Puebla, México**
Full-Stack Developer *August 2024 – September 2026*

- Designed and implemented a CI/CD pipeline with GitHub Actions to automate frontend and backend deployments, reducing manual errors and standardizing the team's delivery process.
- Developed and maintained multiple REST APIs with Laravel, PHP, MySQL, and MariaDB to manage participant registration for events and conferences, integrating Stripe payments and automating tasks with scheduled jobs and cron jobs.
- Used AI coding agents (Pi, Zed Delta) to refactor legacy code and migrate two projects from PHP 7.3 (end-of-life) to PHP 8.2, adding unit and integration tests and reducing technical debt.
- Accelerated the delivery of MVPs for clients by incorporating AI-assisted development into the team's workflow.
- Maintained and evolved a React dashboard for user management, featuring a table structure generated dynamically from the database, local storage with IndexedDB, and an offline-first implementation.

Skills

- Programming Languages: Java, Golang, Php, TypeScript, HTML, CSS, XML.
- Frameworks: Spring Boot, React, Laravel
- Databases: MySQL, MariaDB, PostgreSQL, Supabase
- DevOps and Tools: GitHub Actions, CI/CD, Task Scheduling
- Security & Authentication: JWT, OAuth
- Languages: Spanish (Native),English (Intermediate)

PROJECTS

Control Escolar **Puebla, México**
January 2024 - September 2024

- Gathered requirements and designed the architecture of a Java backend built with Spring Boot to manage academic data.
- Implemented secure user authentication with JWT.

Proyecto Filtro **Puebla, México**
May 2022 – January 2023

- Developed a desktop application that processes frequency data from Excel, sends it to an Arduino for filtering, and visualizes the results.
- Improved data processing speed by 50%, enabling real-time analysis and response.

EDUCATION

Escuela Superior de Ciencias y Humanidades **Puebla, México**
Bachelor's Degree in Computer Systems *August 2020 - August 2024*
Honors: Highest GPA of the program.
